Zephyr Project Overview

A proven RTOS ecosystem, by developers, for developers

Use cases for a real-time OS

Zephyr®

Industrial IoT

Asset Tracking

Wearables
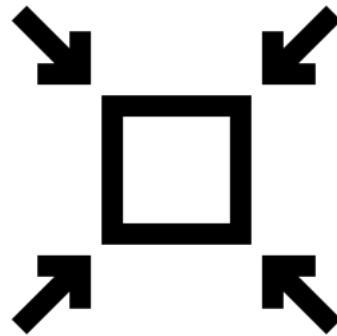

Automotive

Healthcare

Worker Safety
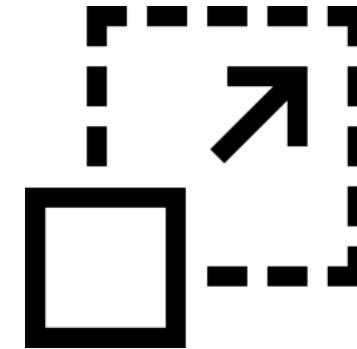

# SMALL *yet* SCALABLE

< 8KB Flash

< 5KB RAM
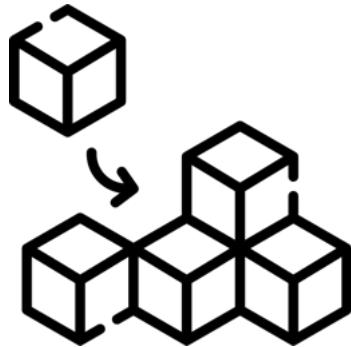

from small sensor nodes

... to complex multi-core systems

FLEXIBLE *yet* SECURE

Heavily customizable

Out-of-the-box support for
600+ boards and 100s of sensors

Built with safety & security in mind

Certification-ready

Long-term Support
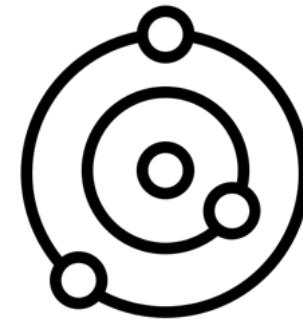

OPEN-SOURCE

ECOSYSTEM

Permissively licensed (Apache 2.0)

Vibrant community

Vendor-neutral governance

Supported by major silicon vendors

Features overview

- **Lightweight kernel & supporting drivers and services**

- **Portable**, **secure**, **power-efficient**

- **Highly connected**
  - Bluetooth 5.0 & BLE
  - Wi-Fi, Ethernet, CANbus, …
  - IoT protocols: CoAP, LwM2M, MQTT, OpenThread, …
  - USB & USB-C

- **Complete developer environment**
  - Toolchain and HAL management
  - Logging, tracing, debugging,
  - Emulation/Simulation
  - Testing framework

Sustainable energy solutions

Vestas is the energy industry's global partner on sustainable energy solutions. We design, manufacture, install, and service onshore and offshore wind turbines across the globe, and with more than 164 GW of wind turbines in 87 countries, we have installed more wind power than anyone else. Through our industry-leading smart data capabilities and unparalleled more than 144 GW of wind turbines under service, we use data to interpret, forecast, and exploit wind resources and deliver best-in-class wind power solutions. Together with our customers, Vestas' more than 28,000 employees are bringing the world sustainable energy solutions to power a bright future.

Products Running Zephyr Today

Professional grade, digital tape measure

The T1 Tomahawk, the world's first, professional grade, digital tape measure enables tradespeople, across industries, to collect measurements faster and more accurately than ever before. A live view, OLED display, shows measurements of the tape measure, digitally, in both english and metric units. With a click of a button, measurements are saved to a side mounted e-paper display as well as sent over Bluetooth to connected devices.

Turns your wired sensors into IP67-rated battery-operated wireless nodes, providing robust and secure messaging

Ezurio's **Sentrius™ BT610** I/O Sensor with Bluetooth 5 turns your wired sensors into IP67-rated battery-operated wireless nodes, providing robust and secure messaging. Leveraging our BL654 module, it provides full Bluetooth 5 capabilities, opening up industrial and equipment monitoring applications.

Devicetree

Describe & **configure** the available hardware on the target system

Decouple the application from the hardware

+ **Kconfig** for all things configuration

ℹ️ **docs.zephyrproject.org/latest/build/dts**

```
&i2c1 {
    pinctrl-0 = <&i2c1_scl_pb8 &i2c1_sda_pb9>;
    pinctrl-names = "default";
    clock-frequency = <I2C_BITRATE_FAST>;
    status = "okay";

    lsm6dsl@6a {
        compatible = "st,lsm6dsl";
        reg = <0x06a >;
    };

    hts221@5f {
        compatible = "st,hts221";
        reg = <0x5f >;
    };

    // …
};
```

.dts file example

West meta-tool
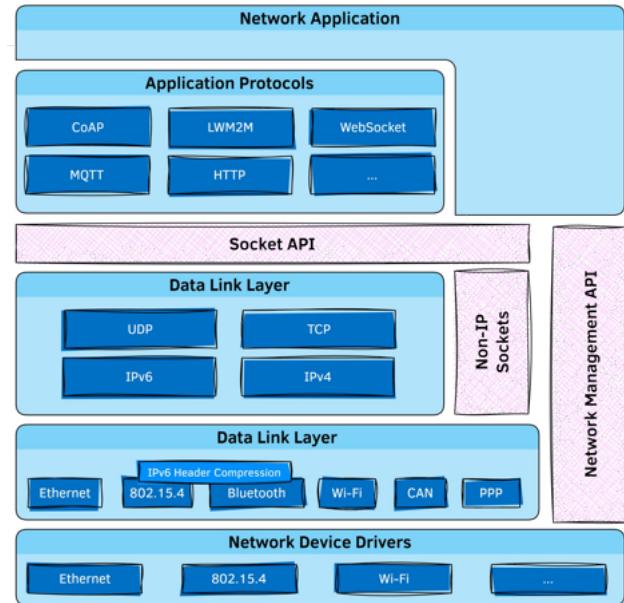

- **Module Management**
  - Simplifies Versioning and integration of various modules/libraries in the build system

- **Build**

- Extensible **command-line interface**
  - e.g. custom commands for specific board
 - Static code analysis, RAM/ROM reports
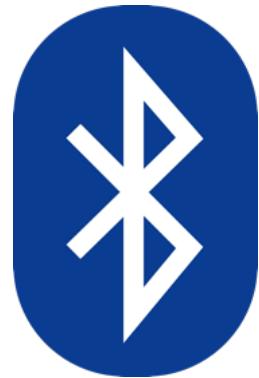

Connectivity Options

- Wide variety of **communication protocols**
  - Ethernet, 802.15.4, Thread, LoRa, Bluetooth, CAN bus, ...

- **Core network protocols** like IPv6, IPv4, UDP, TCP, ICMPv4, and ICMPv6.

- **Security** (ex. TLS, DTLS, ...)

- **Cloud integration** using MQTT, CoAP and HTTP protocols

- **Over-the-air updates**

- **Device management** using OMA LwM2M 1.1 protocol

Native IP Stack

- Built from scratch, on top of Zephyr native kernel concepts

- Dual mode **IPv4/IPv6 stack**
  - DHCP v4, IPv4 autoconf, IPv6 SLAAC, DNS, SNTP

- Multiple network interfaces support

- Time Sensitive Networking support

- **BSD Sockets**-based API

- Supports IP offloading

- **Compliance and security** tested

Bluetooth 5.3 compliant •
LE Controller • Host • Mesh •
Bluetooth-SIG qualifiable

USB 2.0 • USB-C •
Device & Host • WebUSB

Power Management

- **<u>Goal</u>**: reduce power consumption while preserving responsiveness

- **Key concepts**

  - **Tickless kernel**

  - System PM: idle thread, interruptions only for registered events

  - Device PM: device drivers can react to PM state changes

- Handled by the kernel / Customizable by the user

Zephyr USB Device Stack

- **USB 2.0** & **USB-C** support

- Supports multiple MCU families (STM32, Kinetis, nRF, SAM,...)

- Supports most common devices classes: CDC, Mass Storage, HID, Bluetooth HCI over USB, DFU, USB Audio, etc.

- Tight integration with the RTOS

- Native execution support for emulated development on Linux

- WebUSB support

Power Management

- Goal: use as little power as possible

- Cross-platform (architecture / SoC agnostic)

- Tickless scheduler

- Handled by the kernel / Customizable by the user

Devicetree

Describe & **configure** the available hardware on the target system

Decouple the application from the hardware

docs.zephyrproject.org/latest/build/dts

```
&i2c1 {
    pinctrl-0 = <&i2c1_scl_pb8 &i2c1_sda_pb9>;
    pinctrl-names = "default";
    clock-frequency = <I2C_BITRATE_FAST>;
    status = "okay";

    lsm6dsl@6a {
        compatible = "st,lsm6dsl";
        reg = <0x06a >;
    };

    hts221@5f {
        compatible = "st,hts221";
        reg = <0x5f >;
    };

    // …
};
```

.dts file example
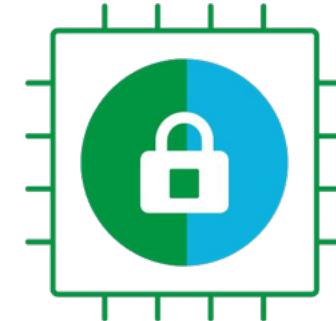

Secure boot / Device Management

- Leverage **MCUboot** as secure bootloader

- Application binary can be signed/encrypted
  - Can use hardware keys

- But also:
  - Downgrade prevention
  - Dependency checks
  - Reset and failure recovery

- Over-the-air (OTA) upgrades
  - OMA LwM2M, Eclipse hawkBit
  - Vendor offerings

Hardware security

- **Cryptography APIs**
  - Random Number Generation, ciphering, etc.
  - Supported by crypto HW, or SW implementation (TinyCrypt)

- **Trusted Firmware** integration
  - Firmware verification/encryption
  - Device attestation
  - Management of device secrets

Building on POSIX

- **Zephyr apps can run as native Linux applications**
  - Easier to debug/profile with native tools
  - Connect to real devices using TCP/IP, Bluetooth, CAN
  - Helps minimize hardware dependencies during the development phase

- **Re-use existing code & libraries by accessing Zephyr services through POSIX API**
  - Easier for non-embedded programmers
  - Implementation is optimized for constrained systems
  - Supported POSIX subsets: PSE51, PSE52, and BSD sockets

docs.zephyrproject.org/latest/guides/portability/posix.html

A real-time OS

Benchmark on Arm Cortex-M4F running at 120 MHz

Operation	Time
Thread create	2.5 µs
Thread start	3.6 µs
Thread suspend	3.3 µs
Thread resume	3.8 µs
Context switch (yield)	2.2 µs
Get semaphore	0.6 µs
Put semaphore	1.1 µs

github.com/zephyrproject-rtos/zephyr/tree/main/tests/benchmarks

Graphical User Interfaces

- Drivers available for various types of displays
  - LCD
  - OLED
  - Touch panel displays
  - E-ink

- LVGL integration

- Support for video capture and output

Inter-Process Communication

- **Built-in kernel services** (see table)

- **IPC service**
  - 1-to-1 or 1-to-many communications
  - No-copy API

- **zbus** (Zephyr Message Bus)
  - 1-to-1, 1-to-many, or many-to-many channel-based communications
  - Synchronous or asynchronous

Object	Bidirectional?	Data structure
FIFO	✘	Queue
LIFO	✘	Queue
Stack	✘	Array
Message queue	✘	Ring buffer
Mailbox	✔	Queue
Pipe	✘	Ring buffer
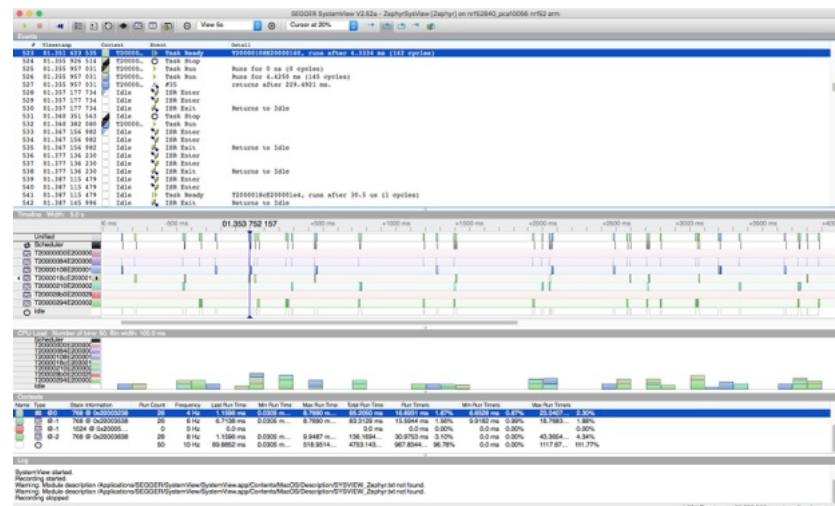

Data passing objects available in Zephyr kernel
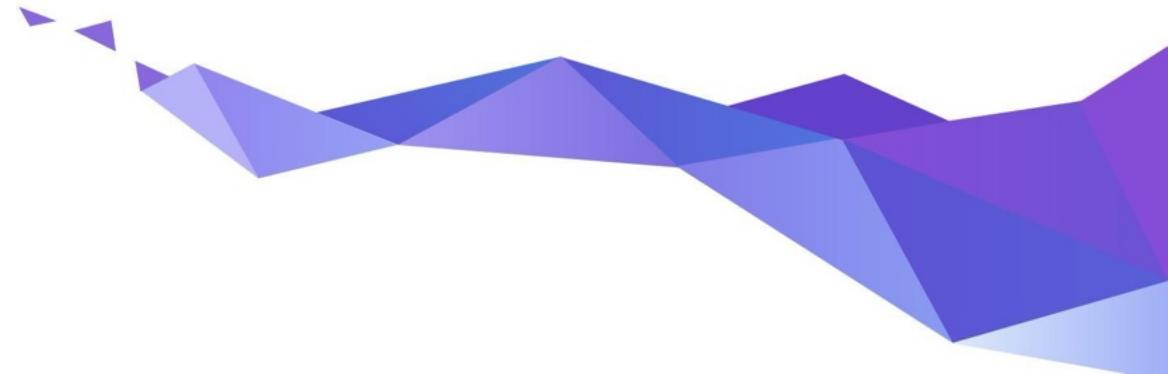

A typical zbus application architecture

Tracing & Debugging
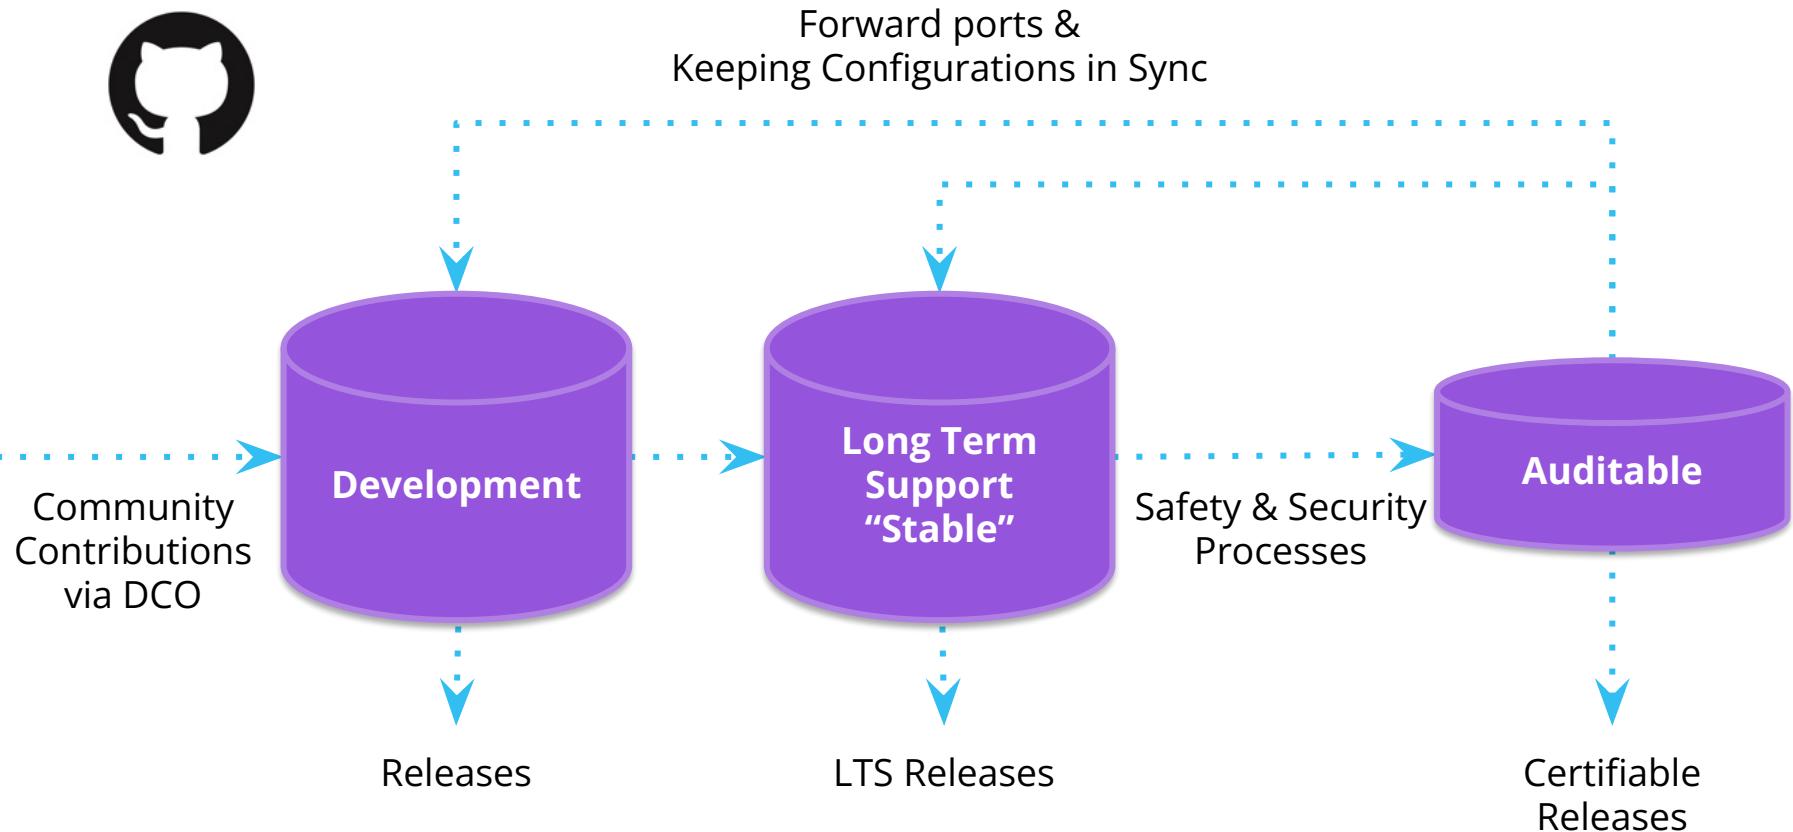

- Advanced **logging** framework
  - Multiple backends (UART, network, file system, ...)
  - Compile-time & runtime filtering

- **Tracing** framework
  - Visualize the inner-working of the kernel and its various subsystems
  - Object tracking (mutexes, timers, etc.)

Safety & Security Processes

Auditable

Releases

LTS Releases

Certifiable Releases

Zephyr®

Long Term Support (Zephyr 2.7.x)

- **Product Focused**

- Current with latest **Security Updates**

- Compatible with new hardware
  - Functional support for new hardware is regularly backported

- **Tested**: Shorten the development window and extend the Beta cycle to allow for more testing and bug fixing

- **Supported for 2+ years**

- ⚠️ **Doesn't include cutting-edge functionality**

github.com/zephyrproject-rtos/zephyr/releases/tag/zephyr-v2.7.0

Long Term Support (LTS - 1.14)

Delivered bug fixes and latest security updates for 2 years!

Auditable

- An **auditable code base** will be established from a **subset of the Zephyr OS LTS**

- Code bases will be kept in sync

- More rigorous processes (necessary for certification) will be applied to the auditable code base.

- Processes to achieve selected certification to be:
  - Determined by Safety Committee and Security Committee
  - Coordinated with Technical Steering Committee

Project Security Documentation

- **Project Security Overview**

- Started with documents from other projects

- Built around Secure Development, Secure Design, and Security Certification

- Ongoing process, rather than something to just be accomplished

Software Supply Chain

- Zephyr ships an **SBOM** (Software Bill of Materials) with each release
- Downstream consumers can leverage built-in tools to, in turn, generate source & build SBOMs for their deliverables

```
[...]
FileName: ./zephyr/zephyr.elf
SPDXID: SPDXRef-File-zephyr.elf
FileChecksum: SHA1: e74cebcac51dabd799957ac51e4edcd32541103d
[...]
Relationship: SPDXRef-File-zephyr.elf GENERATED_FROM SPDXRef-File-dev-handles.c
Relationship: SPDXRef-File-zephyr.elf GENERATED_FROM SPDXRef-File-isr-tables.c
Relationship: SPDXRef-File-zephyr.elf STATIC_LINK SPDXRef-File-libapp.a
Relationship: SPDXRef-File-zephyr.elf STATIC_LINK SPDXRef-File-libzephyr.a
Relationship: SPDXRef-File-zephyr.elf STATIC_LINK SPDXRef-File-libisr-tables.a
Relationship: SPDXRef-File-zephyr.elf STATIC_LINK SPDXRef-File-libkernel.a
[...]
```

Automating SBOM Generation During Build!

1. Create a build directory with CMake file API enabled
2. Build project with "build metadata" enabled
3. Compute SBOM(s)

```
west spdx --init -d BUILD_DIR
west build -d BUILD_DIR -- -DCONFIG_BUILD_OUTPUT_META=y
west spdx -d BUILD_DIR
```

⟹

`zephyr.spdx`	SBOM for the **Zephyr source files** actually used by your application
`app.spdx`	SBOM for the source files of your **application**
`build.spdx`	SBOM for **all the build objects**, inc. of course your final image

SBOM's at Scale...Automatically

708 boards

13 apps

All BUILT,
PASSED,
GENERATED
have **3 SBOM**s
available to
download &
inspect

CVE Numbering Authority

- **Registered with MITRE** in 2017
  - We issue our own CVEs

- **Zephyr Project Security Incident Response Team** (PSIRT)
  - Volunteers from the Security Subcommittee led by the Zephyr Security Architect.

Zephyr Project

The majority of the links on this page redirect to external websites ⬀; these links will open a new window or tab depending on the web browser used.

Scope	Zephyr project components, and vulnerabilities that are not in another CNA's scope
Root	**MITRE Corporation**
Security Advisories	**View Advisories**
Program Role	CNA
Organization Type	Vendors and Projects
Country*	USA

OpenSSF Gold Badge

- [Core Infrastructure Initiative](#) Best Practices Program

- Awards badges based on "project commitment to security"

- Mostly about project infrastructure: is project hosting, etc following security practices

- Gold status since Feb, 2019
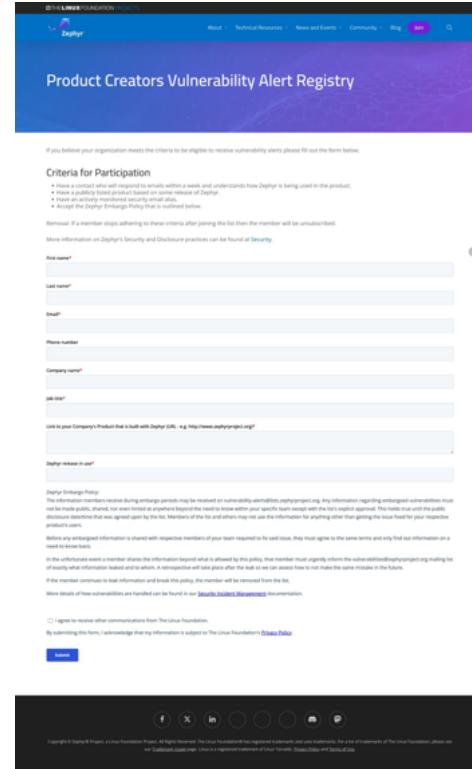

Vulnerability Alert Registry

- For an **embargo** to be effective, product makers need to be **notified early** so they can **remediate**

- The project aims at **fixing issues within 30 days** to give **vendors 60 days** before publication of vulnerability

zephyrproject.org/vulnerability-registry

Zephyr PSIRT: Remediation and Response

Advisory Issued by project on 20201208:

○ Zephyr current release (2.4) does not use Fnet or other stacks.

○ The Zephyr LTS release 1.14 contains an implementation of the TCP stack from Fnet.

Of the vulnerabilities reported in Fnet, 2, CVE-2020-17468, and CVE-2020-17469, are in the IPv6 Fnet code, one, CVE-2020-17467, affects Link-local Multicast Name Resolution LLMNR), and 2, CVE-2020-24383, and CVE-2020-17470 affect DNS functionality.

None of the affected code has been used in the Zephyr project, while 1.14 does use the Fnet TCP, it does not use the affected IPv6, DNS or LLMNR code.

Compliant Development: V-model

It is difficult to map a stereotypical open-source development to the V-model

- Specification of features
- Comprehensive documentation
- Traceability from requirements to source code
- Number of committers and information known about them

Zephyr RTOS functional safety work products mapping to IEC 61508-3 V model

⇒ Provide the evidences that open source developers can map to compliance and meet all requirements
